

Security Engineering for Small Business

IECA Small Business Primary Security Audit

As a small business itself, IECA recognizes the difficulties that small businesses face in addressing modern cyber security challenges. So we have identified fixed-price services to simplify the process of reaching out for the help you need.

Our **primary security audit package** provides a top-level review of the cyber security posture of your business for a fixed price. This limits the level of your investment, and your risk, yet enables you to benefit from our expertise while you get to know what we can do.

For a one-time investment of **\$1,095⁰⁰** we will visit your facility to perform an on-site audit of your business, and identify risk areas. We collect all the information we need for a initial security analysis with a single visit, and prepare a comprehensive report identifying critical risk areas that merit your attention.

Our services reflect our company's quarter century of experience in Government service. IECA helped to write the book on information security, and our fingerprints are on a wide array of industry security solutions. Let us put our experience to work for you.

This package is restricted only to small businesses with fewer than 50 employees and a single facility within 500 miles. We also have other contracting options available if your business falls outside these limits.

What We Do:

- ✓ Spend a day learning about your:
 - Business process
 - Information assets
 - IT architecture
 - Company policies
- ✓ Listen to your concerns
- ✓ Develop a confidential report identifying primary risk areas

What We Don't:

- ✗ Interfere with your business
- ✗ Disclose any proprietary information
- ✗ Make any modifications to your IT

What We Need:

- ★ Access to a senior official
- ★ Access to facility
- ★ Access to any written policies
